**Lyme Ab Modified 2-Tier w/Reflex, S**
**Positive**

Not diagnostic. Testing performed by EIA for total antibodies against Borrelia sp. VlsE1/pepC10. Supplemental testing in accordance with the modified two-tiered testing algorithm for Lyme disease has been ordered by reflex.

 Negative

**Lyme Ab Interpretation**
**SDL**

IgM and IgG-class antibodies to the Borrelia (Borrelia) species causing Lyme disease were detected, suggesting infection in the recent or remote past. Antibodies may remain detectable for months to years following resolution of infection. Results should not be used to monitor or establish adequate response to therapy. Response to therapy is confirmed through resolution of clinical symptoms; additional laboratory testing should not be performed. If both first and second tier tests are equivocal consider repeat testing in 7–14 days if clinically warranted. Interpretation assumes first tier Borrelia antibody test was performed and resulted as positive or equivocal.
