## Hantavirus Antibody (IgG, IgM)

Hantavirus Ab (IgG)

Y038

Y038

**NEGATIVE** 

Hantavirus Ab (IgM)

**NEGATIVE** 

REFERENCE RANGE: NEGATIVE

This assay detects antibodies against recombinant Hantavirus antigens of both old world and new world Hantavirus types. The immune response to Hantavirus infection is not type-specific, and thus cross-reactivity

may occur. All Hantavirus IgM-positive samples from US residents will be sent to a Public Health Laboratory for Sin Nombre Virus (SNV)-specific IgM testing. Samples that are Hantavirus IgG positive but IgM negative will not be subjected to further type-specific testing, since the lack of IgM rules out acute infection.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.

Received: 09 Feb 2022 08:04 Reported: 10 Feb 2022 12:56
