Thyroglobulin, Tumor Marker

Thyroglobulin Antibody, S

<1.8 IU/mL

SDL
Reference Value
<1.8

Thyroglobulin, Tumor Marker, S

<0.1 ng/mL

SDL

REFERENCE VALUE

Athyrotic <0.1
Intact Thyroid ≤33

Thyroglobulin Interpretation

SDL

Thyroglobulin (Tg) levels must be interpreted in the context of TSH levels, serial Tg measurements and radioiodine ablation status. Tg levels <0.1 ng/mL in athyrotic individuals on suppressive therapy indicate a minimal risk (<1–2%) of clinically detectable recurrent papillary/follicular thyroid cancer.

ADDITIONAL INFORMATION

PLEASE NOTE: A thyroglobulin antibody (TgAb) reference cutoff of <4.0 IU/mL may be more suitable for the evaluation of autoimmune thyroiditis. Thyroglobulin flagging is based on athyrotic reference values.

The thyroglobulin and thyroglobulin antibody testing methods are immunoenzymatic assays manufactured by Beckman Coulter Inc. and performed on the Unicel DXI 800.

Values obtained from different assay methods or kits may be different and cannot be used interchangeably.

The results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.
