## **PSA**, Ultrasensitive, S

2.0 ng/mL

 $\begin{array}{l} \text{SDL} \\ \text{Reference Value} \\ \leq 3.5 \end{array}$ 

ADDITIONAL INFORMATION

## **INTERPRETATION:**

After radical prostatectomy, serum PSA concentrations should decrease and remain at undetectable levels. The American Urological Association defines biochemical recurrence as an initial PSA concentration  $\geq$ 0.20 ng/mL followed by a subsequent confirmatory PSA concentration  $\geq$ 0.20 ng/mL.

PLEASE NOTE: The above reference interval and flagging is

intended for healthy males without prostatectomy.

The testing method is an electrochemiluminescence assay manufactured by Roche Diagnostics Inc. and performed on the Cobas system.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.

Test results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.
